

K.S. Rangasamy College of Technology

(Autonomous)

Curriculum & Syllabus of B.Tech. Textile Technology

(For the batch admitted in 2019 – 2023)

R 2018

**Courses Accredited by NBA, Accredited by NAAC with 'B++' Grade,
Approved by AICTE, Affiliated to Anna University, Chennai.**

**KSR Kalvi Nagar, Tiruchengode – 637 215.
Namakkal District, Tamil Nadu, India.**

VISION

To be the centre of excellence in textile education, training, research and service.

MISSION

- To enlighten the students about the latest technology in textile industries through innovative educational practices and multi-disciplinary approach.
- To engage with the industry as solution providers through consultancy.

PROGRAM EDUCATIONAL OBJECTIVES (PEOs)

- PEO1: Production Process and Solutions to Problems:** Graduates are competent in textile production processes and be able to identify problems and suggest suitable solutions.
- PEO2: Modern Tools & Technology and Ethics:** Graduates use latest tools and technology for the production of textile materials and serve society in an ethical manner.
- PEO3: Skills, Entrepreneurship and Life Long Learning:** Graduates will exhibit skills in their career and develop entrepreneurial culture through life-long learning.

PROGRAMME OUTCOMES (POs)

Engineering Graduates will be able to:

- PO1: Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- PO2: Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- PO3: Design /development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- PO4: Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- PO5: Modern tool usage:** Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations
- PO6: The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- PO7: Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- PO8: Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- PO9: Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- PO10: Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
- PO11: Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
- PO12: Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAMME SPECIFIC OUTCOMES (PSOs):

Engineering Graduates will be able to:

- PSO1: Application of Basic Concepts:** Apply fundamental concepts in the areas of spinning, weaving, testing, garment making and processing.
- PSO2: Solution for Industrial Problems:** Solve industrial problems in textile industries considering environmental issues to improve quality and productivity.
- PSO3: Moral Values:** Demonstrate social and ethical responsibilities relevant to textile industries.

MAPPING OF PROGRAMME EDUCATIONAL OBJECTIVES (PEOs) WITH PROGRAMME OUTCOMES (POs)

The B.Tech.Textile Technology Programme Outcomes leading to the achievement of the Program Educational Objectives are summarized in the following table.

Programme Educational Objectives	Programme Outcomes											
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
PEO 1	3	3	3	3	3	2	2	1	3	2	3	2
PEO 2	2	2	3	2	3	2	2	3	2	2	2	2
PEO 3	3	2	2	2	2	2	1	1	3	2	3	3

Contributions: 1- Low, 2- Medium, 3- High

SEMESTER I

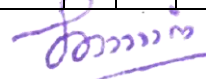

S.No.	Course Code	Course Title	Category	Contact Periods	L	T	P	C
THEORY								
1.	50 EN 001	Communication Skills I	HS	2	1	1	0	2
2.	50 MA 001	Calculus and Differential Equations	BS	4	3	1	0	4
3.	50 PH 005	Applied Physics for Textile	BS	3	3	0	0	3
4.	50 CS 001	Programming for Problem Solving	ES	3	3	0	0	3

50 EN 001 – Communication Skills I

Common to all Branches

Semester	Hours/Week			Total hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
I	1	1	0	30	2	50	50	100
Objective(s)	<ul style="list-style-type: none"> To help learners improve their vocabulary and to enable them to use words appropriately in different academic and professional contexts. To help learners develop strategies that could be adopted while reading texts. To help learners acquire the ability to speak effectively in English in real life and career related situations. To equip students with effective speaking and listening skills in English. To facilitate learners to enhance their writing skills with coherence and appropriate format effectively. 							
Course Outcomes	<p>At the end of the course, students will be able to</p> <ol style="list-style-type: none"> Utilize digital literacy tools to develop listening skills & make use of contextual clues to infer meanings of unfamiliar words Able to select, compile & synthesize information using communication strategies for an effective oral presentation Skim & Scan the textual content & infer meanings of unfamiliar words to develop reading & vocabulary skills Generate ideas from sources to develop coherent content and support with relevant details in writing Recognize the basic phonetic patterns of language & execute it for competent loud reading 							

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Listening

Listening to Short Audios – Watching Short Videos - answering MCQs and Vocabulary Check- Listening to Short Comprehension Passages – Guided Listening – Listening to songs and cognizing the lyrics [4]

Speaking

Brainstorming – Group Discussion (unstructured) – Self Introduction - Just a Minute (JaM) - Short Narratives – Cue Cards – Picture Cards – Conversational Practices (Preliminary) [4]

Reading

Silent Reading – Scanning and Skimming - Reading short and Medium Passages – Cognition of Theme and Inferential Meaning - Academic and Functional Vocabulary List (350 words) – Word Power Check - Loud Reading – Modulation and Pronunciation Check [4]

Writing

Functional Vocabulary and Word Power – Data Interpretation - Paragraph Writing – Letter Writing –Email Writing – Conversational Fill Ups [3]

Lecture Hour: 15; Tutorial Hour: 15; Total Hours: 30

Text Book(s):

1.	M.Ashraf Rizvi, 'Effective Technical Communication', 2 nd Edition, McGraw Hill Education (India) Private Limited, Chennai, 2018
2.	Norman Lewis, 'Word Power Made Easy - The Complete Handbook for Building a Superior Vocabulary Book', Penguin Random House India, 2020

50 MA 001 - Calculus and Differential Equations

Common to All Branches

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
I	3	1	0	60	4	50	50	100

Objective(s)	<ul style="list-style-type: none"> The goal of this course is to achieve conceptual understanding and to retain the best traditions of traditional calculus. The syllabus is designed to provide the basic tools of calculus mainly for the purpose of modeling the engineering problems mathematically and obtaining solutions. Matrix Algebra is one of the powerful tools to handle practical problems arising in the field of engineering. This course deals with topics such as single variable and multivariable calculus and plays an important role in the understanding of science, engineering, economics and computer science, among other disciplines. Development of mathematical skills to solve the differential equations.
--------------	---

Course Outcomes	<p>At the end of the course, the students will be able to</p> <ol style="list-style-type: none"> Apply Cayley - Hamilton theorem to find inverse matrix and transformation techniques to reduce quadratic form into canonical form. Determine the circle of curvature, evolute and envelope of the curves. Analyze the Jacobian methods and the constrained maxima and minima function. Solve the linear and simultaneous differential equations. Evaluate definite and indefinite integrals using different techniques.
-----------------	--

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Matrices

Characteristic equation – Eigen values and Eigen vectors of a real matrix – Properties of Eigen values and Eigen vectors – Cayley-Hamilton theorem (without proof) – Orthogonal transformation of a symmetric matrix to diagonal form – Reduction of quadratic form to canonical form by orthogonal transformation - Nature of quadratic form.

[8]

Differential Calculus

Curvature – radius of curvature (Cartesian and polar co-ordinates) – Centre of curvature – Circle of curvature – Involute and evolute – envelope.

[9]

Functions of Several Variables

Partial differentiation – Homogeneous functions and Euler's theorem – Jacobians – Taylor's series for functions of two variables – Maxima and minima of functions of two variables – Constrained maxima and minima : Lagrange's Method of Undetermined Multipliers.

[9]

Differential Equations

Linear differential equations of second and higher order with constant co-efficient - R.H.S is $e^{\alpha x}$, $\sin \alpha x$, $\cos \alpha x$, x^n $n > 0$, $e^{\alpha x} \sin \beta x$, $e^{\alpha x} \cos \beta x$, $e^{\alpha x} x^n$, $x^n \sin \alpha x$ and $x^n \cos \alpha x$ – Differential equations with variable co-efficients : Cauchy's and Legendre's form of linear equation – Method of variation of parameters – Simultaneous first-order linear equations with constant co-efficients.

[9]

Integral Calculus

Definite and Indefinite integrals - Substitution rule - Techniques of Integration - Integration by parts, Trigonometric integrals, Trigonometric substitutions, Integration of rational functions by partial fraction, Integration of irrational functions - Improper integrals.

50 PH 005 - Applied Physics for Textile

B.Tech Textile Technology

Semester	Hours/week				Credit	Maximum marks		
	L	T	P	Total hrs		CA	ES	Total
I	3	0	0	45	3	50	50	100

- Objective(s)**
- To Explain the principles of laser, types of laser and demonstrate the applications of laser
 - To state the principle of optical fiber and to understand the design and applications of optical fibers
 - To study the basics of ultrasonic's, production of ultrasonic waves and non destructive techniques
 - To understand the theory of the surface tension of liquids and correlate the property of surface tension with different natural phenomena.
 - To enrich the understanding of advanced materials and nanotechnology for their applications in engineering and technology

- Course Outcomes**
- At the end of the course, Students will be able to**
1. Know the basic idea about classification of lasers with applications.
 2. Explain the propagation of lights in fibre optics and communication link and its applications.
 3. Gives explanation for production, detection of ultrasonic waves and its applications.
 4. Have the knowledge and apply the properties of surface tension, viscosity and friction.
 5. Gain a broad view of smart materials and nano materials.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Lasers

Einstein's theory of matter radiation interaction and A and B coefficients; amplification of light by population inversion-different types of lasers: gas lasers (CO₂), solid-state lasers (Nd: YAG), dye lasers, Semiconductor laser (Homojunction and Hetero junction)-Properties of laser beams-applications of lasers in science and engineering. [8]

Fiber Optics and Sensors

Principles – cone of acceptance, numerical aperture (derivation)- Modes of propagation –Fabrication of optical fibre: Crucible-crucible technique - Classification: based on materials, modes and refractive index profile– Splicing : types of splicing- Losses in optical fiber – Detectors – Fiber optical communication links (Block diagram) – Advantage of fiber optical cable over copper cables- Fiber optic sensors: liquid level sensors, Temperature and Displacement sensors. [9]

Ultrasonics and Applications

Introduction-Properties-Production: Magnetostriction effect, Magnetostriction generator- piezoelectric effect, piezoelectric generator – Ultrasonic detection- acoustical grating-Applications: Cavitation, cleaning, SONAR– Non destructive testing: Pulse echo system, through transmission, resonance system- Medical applications: cardiology, neurology, ultrasonic imaging (A, B and TM- Scan). [9]

Surface Tension, Viscosity and Friction

Molecular forces-Rise of liquids in a capillary tube-Determination of surface tension by capillary rise method-Viscosity-Co-efficient of viscosity-streamline and turbulent flow-Reynold's number-Poiseuille's equation for the flow of liquid through a tube-Volume of liquid flowing out-Stoke's law-Terminal velocity-Experimental determination of co-efficient of viscosity for a liquid by Poiseuille's method-Comparision of viscosities-Ostwald viscometer-friction-factors influencing friction-rolling and sliding friction-hydrodynamic friction-stick slip phenomenon. [10]

Advanced Materials and Nanotechnology

New Engineering Materials: Metallic glasses – preparation, properties and applications – Shape memory alloys (SMA) – characteristics, properties of NiTi alloy applications – advantages and disadvantages of SMA

Nano Materials: Nanomaterials: Properties- Top-down process: Ball Milling method – Bottom-up process: Vapour Phase Deposition method- Carbon Nano Tube (CNT): Properties, preparation by electric arc method, Applications. [9]

50 CS 001 - Programming For Problem Solving

Common to all Branches

Semester	Hours/Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
I	3	0	0	45	3	50	50	100
Objective(s)	<ul style="list-style-type: none"> To learn the evolution of computers and examines the most fundamental element of the C language To examine the execution of branching, looping statements, arrays and strings. To understand the concept of functions , pointers and the techniques of putting them to use To apply the knowledge of structures and unions to solve basic problems in C language To enhance the knowledge in file handling functions for storage and retrieval of data 							
Course Outcomes	<p>At the end of the course, the students will be able to</p> <ol style="list-style-type: none"> Infer the evolution, generation, representation of problem and recognize the concepts of data types and expressions Annotate the concept of console Input and output features and examine the execution of branching, looping statements, arrays and strings Recognize the concepts of functions, recursion, storage class specifies and pointers with its features Comprehend basic concepts of structures ,unions ,user defined data types and pre processor Interpret the file concepts using proper standard library functions 							

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Introduction to Computer and Programming

Introduction to Computers - Evolution of computers - Generations of computers and Programming Languages– Introduction to components of a computer system -Idea of Algorithm: steps to solve logical and numerical problems. Representation of Algorithm: Flowchart–Pseudocode with examples. From algorithms to programs–variables (with data types)– Type Qualifiers - Constants – Operators –expressions and precedence [9]

I/O ,Branching, Loops and Arrays

Console I/O– Unformatted and Formatted Console I/O – Conditional Branching and Loops -Writing and evaluation of conditionals and consequent branching -Iteration and loops - Arrays (1-D, 2-D), Character arrays and Strings [9]

Functions and Pointers

Functions: Scope of a Function – Library Functions and User defined functions - Function Prototypes – Function Categorization - Function Arguments - Arguments to main function - The return Statement - Recursion - Passing Arrays to Functions– Storage class Specifiers. Introduction to Pointer Variables - The Pointer Operators - Pointer Expressions - Pointers and Arrays - Generating a Pointer to an Array - Indexing Pointers– Dynamic memory allocation [9]

Structures, Unions, Enumerations, Typedef and Preprocessors

Structures - Arrays of Structures- Arrays and Structures within Structures - Passing Structures to Functions - Structure Pointers - Unions – Bit Fields - Enumerations - typedef – The preprocessor and comments. [9]

File

File: Streams –Reading and Writing Characters - Reading and Writing Strings -,File System functions - Random Access Files [9]

Total Hours: 45

Text book(s):

50 ME 001 - Engineering Drawing

Common to Civil , Mech, MCT & Tex

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
I	2	0	4	90	4	50	50	100

Objective(s)	<ul style="list-style-type: none"> To acquire various concepts like dimensioning, conventions and standards. To impart the graphic skills for converting pictorial views of solids in to orthographic views. To learn the concept of projection of solids. To understand the section of solids and development of surfaces. To learn the concept of isometric projection.
--------------	--

Course Outcomes	<p>At the end of the course, the student will be able to</p> <ol style="list-style-type: none"> Use the drafting instruments and construct the conic sections Convert the pictorial views of solids in to orthographic views Draw the projections of regular solids and floor plans Draw the true shape of sections and develop the lateral surfaces of right solids Sketch the three dimensional view of solids for given orthographic views.
-----------------	--

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Introduction to Engineering Drawing and Plane Curves

Use of drawing instruments – BIS conventions and specifications – Size, layout and folding of drawing sheets – Lettering and dimensioning – Drawing sheet layouts - Title block – Line types – Scales: plain, diagonal and vernier scales. Construction of ellipse, parabola and hyperbola (Eccentricity method) - Construction of rectangular hyperbola - Construction of cycloids, epicycloids and hypocycloids. [7+12]

Orthographic Projection

Introduction to orthographic projections – Planes of projection – Projection of points and lines inclined to both planes – Projection of planes (Inclined to one plane and parallel to other – Inclined to both planes) - Conversions of pictorial views to orthographic views. [6+12]

Projection of Solids and Floor plan

Projections of simple solids: prism, pyramid, cylinder and cone (Axis of solid inclined to both HP and VP) - Floor plans: windows, doors and fixtures such as water closet (WC), bath sink, shower etc. [5+12]

Sections of solids and Development of surfaces

Sections of solids :Prism, Cylinder, Pyramid, Cone – Auxiliary Views - Draw the sectional orthographic views of geometrical solids, objects from industry - Development of surfaces of Right solids – Prism, Pyramid, Cylinder and Cone. [6+12]

Isometric Projection

Principles of isometric projection – Isometric scale – Isometric projections of simple solids: Prism, pyramid, cylinder and cone - Isometric projections of frustum and truncated solids - Combination of two solid objects in simple vertical positions. [6+12]

50 PH 0P1 - Engineering Physics Laboratory								
Common to - MECH, MCT, Textile, FT, BT, NST, CIVIL								
Semester	Hours/week			Total hrs	Credit	Maximum marks		
	L	T	P			C	CA	ES
I	0	0	4	60	2	60	40	100
Objective(s)	<ul style="list-style-type: none"> To gain practical knowledge by applying the experimental methods to correlate with the Physics theory. Demonstrate an ability to make physical measurements and understand the limits of precision in measurements To introduce different experiments to test basic understanding of physics concepts applied in optics and electronics. To enable the students to correlate the theoretical principles with application oriented studies. Analyze the behavior and characteristics of various materials for its optimum utilization 							
Course Outcomes	<p>At the end of the course, Students will able to</p> <ol style="list-style-type: none"> Know the concept stress, strain and elastic limit of a given sample. (1-3) Grasp the knowledge of dependency of viscosity of a liquid. (4-5) Absorb the property of surface tension and capillarity action. (6) Understand the knowledge about optical fiber cable parameter. (7) Have a knowledge of diffraction property of light through a spectrometer grating .(8) Gain the dielectric constant of a given material. (9) Acquire the knowledge of semiconductor photovoltaic solar cells. (10) 							
LIST OF EXPERIMENTS								
<ol style="list-style-type: none"> Determination of Young's modulus of a steel bar by uniform bending method. Determination of Young's modulus of a cantilever (Pin & Microscope method). Determination of rigidity modulus of a wire by torsional pendulum. Comparison of co-efficient of viscosity of two different liquids by Poiseuille's method. Co-efficient of viscosity of highly viscous liquids. Comparison of surface tension of two different liquids by capillary rise method. Determination of NA, acceptance angle, and wave length of a given laser by using optical fiber. Determination of wavelength of mercury spectral lines – spectrometer grating. Determination of dielectric constant. V-I characteristics of solar cell.

50 MA 002 - Laplace Transform and Complex Variables

Common to all Branches

Semester	Hours / Week			Total hrs	Credit C	Maximum Marks		
	L	T	P			CA	ES	Total
II	3	1	0	60	4	50	50	100
Objective(s)	<ul style="list-style-type: none"> Multiple integration is used to solve problems involving volume and surface area. Vector calculus can be widely used for modeling the various of physics. Introduce the fundamental ideas of the functions of complex variables and developing a clear understanding of the fundamental concepts of complex analysis such as analytic function and complex integral. Identify and construct complex - differentiable function. Laplace Transforms can be used for efficiently solving the problems that occur in various branches of engineering disciplines. 							
Course Outcomes	<p>At the end of the course, the students will be able to</p> <ol style="list-style-type: none"> (i) Evaluate double and triple integrals. (ii) Understand the concept of Beta and Gamma functions. Apply the concept of vector calculus to verify Green's, Stoke's and Gauss divergence theorems. Construct analytic function and bilinear transformation. Expand the functions as Taylor's and Laurent's series and evaluate the complex integrals. Apply Laplace transform techniques for solving differential equations. 							

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Multiple Integrals

Double integration – Cartesian and polar coordinates – Change of order of integration – Area between two curves – Area as double integral – Triple integration in Cartesian coordinates.

Beta and Gamma functions: Relationship between Beta and Gamma functions – Properties – Problems. [9]

Vector Calculus

Introduction - gradient of a scalar point function - directional derivative - angle of intersection of two surfaces – divergence and curl(excluding vector identities) - solenoidal and irrotational vectors - Green's theorem in the plane - Gauss divergence theorem -Stokes' theorem(without proof)- verification of the above theorems and evaluation of integrals using them. [9]

Analytic Functions

Analytic functions – Necessary conditions (Cauchy–Riemann equations)- Polar form of Cauchy–Riemann equations – Sufficient conditions (without proof) – Properties of analytic functions – Harmonic function –Harmonic conjugate – Construction of analytic functions– Conformal mapping: $w = z + a$, az , $1/z$ -Bilinear transformation. [9]

Complex Integration

Cauchy's Integral theorem (without proof) – Cauchy's integral formula – Taylor's and Laurent's series (without proof) – Classification of singularities – Cauchy's residue theorem – Contour integration – Circular and semi-circular contours (excluding poles on real axis). [8]

Laplace Transforms

Conditions for existence – Transform of elementary functions – Basic properties – Shifting theorems- Derivatives and integrals of transforms — Transform of unit step function – Dirac's delta function- Initial and final value theorem– Transform of periodic functions. Inverse Laplace transform – Convolution theorem (excluding proof) – Solution of second order ordinary differential equation with constant co-efficients – simultaneous equations of first order with constant co-efficients. [10]

50 CH 001 - Applied Chemistry

Semester	Periods / Week			Total hours	Credit	Maximum marks		
	L	T	P			C	CA	ES
II	3	0	0	45	3	50	50	100

Objective(s)	<ul style="list-style-type: none"> To rationalize the periodic properties such as ionization potential, electronegativity, oxidation state, electro negativity, atomic and molecular orbitals To analyze the thermodynamic functions, concept of cells and corrosion of metals and its control methods To help the learners to analyze the hardness of water and its removal To endow with an overview of spectroscopy principles and its applications To recall the basics of stereochemistry and reaction mechanism
--------------	--

Course Outcomes	<p>At the end of the course, the student will be able to:</p> <ol style="list-style-type: none"> Rationalize the periodic properties, variation of orbitals, interactions and orbitals with energy level diagrams Analyze the thermodynamic functions, cell potentials and corrosion with its control measures Recognize the sources ,hardness of water and its removal Interpret the ranges of the electromagnetic spectrum used for exciting different molecular energy levels in various spectroscopic techniques Review of stereochemistry and types of chemical reactions with their mechanism
-----------------	---

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Periodic Properties

Effective nuclear charge - atomic and ionic sizes - ionization energies - electron affinity - electronegativity - polarizability - oxidation states - penetration of orbitals- variations of s, p, d and f orbital energies of atoms - electronic configurations, ionic, dipolar and Vander- waals interactions. Hard soft acids and bases (HSAB). Molecular orbitals of diatomic molecules - plots of the multicentre orbitals. Equations for atomic and molecular orbitals. Energy level diagrams of diatomics. Pi-molecular orbital of butadiene and benzene. [9]

Chemical Equilibria and Corrosion

Thermodynamic functions - energy - entropy - enthalpy- free energy - Gibbs-Helmholtz equation - Van 't Hoff isotherm. Cell potentials - Nernst equation - applications - EMF series - applications - Potentiometric and Conductometric titrations.

Corrosion- types of corrosion - chemical and electrochemical corrosion - mechanism - Factors influencing corrosion - Corrosion control methods (impressed current and sacrificial anode methods) - Corrosion inhibitors. [9]

Water Chemistry

Sources - Water quality parameters - impurities in water and their effects. Hardness - Estimation of hardness - effect of hard water in various industries-Softening of water- zeolite process- ion-exchange process - reverse osmosis - electrodialysis. Boiler troubles - methods of prevention. [9]

Analytical Techniques and Applications

Absorption laws - Ultra violet spectroscopy (UV) - Principle - Instrumentation (Block diagram) - applications. Infra red spectroscopy (IR)- Instrumentation (Block diagram) - selection rule - types of fundamental vibrations - applications. Nuclear magnetic resonance spectroscopy (NMR) - Principle - selection rule - Instrumentation (Block diagram) - chemical shift - factors influencing the chemical shift -applications. Atomic absorption spectroscopy (AAS) - Principle - Instrumentation (Block diagram) -applications. [9]

Concepts in Organic Chemistry

Structural isomerism- types - Stereoisomerism - geometrical (Maleic and Fumaric acids) - optical isomerism (Lactic and Tartaric acids) - symmetry - chirality- enantiomers - diastereomers - optical activity - absolute configurations.

Introduction to reactions - substitution - addition - oxidation - reduction - cyclization and ring openings - mechanism. [9]

50 EE 001 - Basic Electrical Engineering

Common to all Branches

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
II	3	0	0	45	3	50	50	100

Objective(s)	<ul style="list-style-type: none"> To understand and determine the electrical quantity in DC and AC circuits. To understand the working principle of electrical machines by applying Faraday's laws of electromagnetic induction. To know the sources of electric power generation and explain the working principles of different types of power plant. To understand the various components of low voltage electrical installation and basic house wiring. To implement the principles of energy conservation and understand the need of earthing and safety measures.
--------------	---

Course Outcomes	<p>At the end of the course, the students will be able to</p> <ol style="list-style-type: none"> Analyze the fundamentals of electric circuits excited by DC and AC supply. Explain the construction and working of DC and AC electrical machines and identify their applications. Describe the operation of various types of power plant with their layouts. Recognize the significance of various components of low voltage electrical installations. Demonstrate the various types of wiring used in domestic and to know safety measures.
-----------------	---

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

DC and AC Circuits

Electrical circuit elements (R, L and C), Voltage and current sources – Kirchhoff's current and voltage laws – Serial and parallel circuits – Analysis of simple circuits with DC excitation.

Representation of sinusoidal waveforms, Peak and RMS values, Phasor representation, Real power, Reactive power, Apparent power, Power factor. Analysis of single-phase AC circuits consisting of R, L, C, RL, RC, RLC combinations. [12]

DC Machines

Construction, Types and Operation, Simple Problems – Applications. [6]

AC Machines

Faraday's laws of electromagnetic induction – Transformers: Construction, Working principle, Types, Losses in transformers, Regulation, Efficiency and applications.

Generation of rotating magnetic fields – Three-phase induction motor: Construction, working principle, Characteristics, Starting-Single-phase induction motor: Construction, working principle and applications – Synchronous generators: Construction, Working principle and applications. [8]

Electrical Power Generation Systems

Sources of electrical energy: Renewable and nonrenewable – Principles and schematic diagram of Hydroelectric power plant, Thermal power plant, Nuclear power plant, Solar PV system and Wind energy conversion systems. [5]

Electrical Installations and House Wiring

Components of LT Switchgear: Switch Fuse Unit (SFU), MCB, ELCB, MCCB – Types of Batteries, Important Characteristics for Batteries – UPS.

Single phase and three phase systems: Three phase balanced circuits, Phase sequence, voltage and current relations in star and delta connections- Basic house wiring tools and components – Domestic wiring: Service mains, meter board, distribution board, energy meter. Different types of wiring: staircase, fluorescent lamp and ceiling fan. [8]

Electrical Energy Conservation & Safety

Elementary calculations for energy consumption –BEE Standards –Electrical energy conservation – Methods.

Electric shock, Precautions against shock, Objectives of earthing, Types of earthing – Basic electrical safety measures at home and industry. [6]

50 ME 003 – Engineering Mechanics

Common to all Branches

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
II	3	1	0	60	4	50	50	100

Objective(s)

- To learn a process for analysis of static objects, concepts of force, moment, and mechanical equilibrium in two and three dimensions.
- To learn the equilibrium of rigid bodies such as frames, trusses, beams.
- To identify the properties of surfaces and solids by using different theorem.
- To impart basic concept of dynamics of particles
- To understand the concept of friction and elements of rigid body dynamics.

Course Outcomes

At the end of the course, the student will be able to

1. Use scalar and vector analytical techniques for analysing forces in statically determinate structures.
2. Apply basic knowledge of scientific concepts to solve real-world problems.
3. Calculate the properties of surfaces and solids using various theorems.
4. Analyse and solve problems on kinematics and kinetics.
5. Draw a shear force and bending moment diagrams, analysis of rigid body dynamics and calculation of frictional forces on contact surfaces.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Basics and Statics of Particles

Introduction –Units and Dimensions-Laws of Mechanics–Principle of transmissibility-Lame's theorem, Parallelogram and triangular Law of forces–Vectors–Vectorial representation of forces and moments.

Vector operations

Addition, subtraction, dot product, cross product-Coplanar Forces–Resolution and Composition of forces–Equilibrium of a particle– Forces in space-Equilibrium of a particle in space-Equivalent systems of forces-Single equivalent force.

[9]

Equilibrium of Rigid Bodies

Free body diagram–Types of supports and their reactions–requirements of stable equilibrium–Static determinacy, Moments and Couples–Moment of a force about a point and about an axis–Vectorial representation of moments and couples–Varignon's theorem-Equilibrium of Rigid bodies in two dimensions.

Trusses: Introduction, axial members, calculation of forces on truss members using method of joints-Method of sections.

[9]

Properties of Surfaces and Solids

Determination of Areas and Volumes-Centroid, Moment of Inertia of plane area (Rectangle, circle, triangle using Integration Method; T section, I section, Angle section, Hollow section using standard formula) – Parallel axis theorem and perpendicular axis theorem- Polar moment of inertia –Mass moment of inertia of thin rectangular section –Relation between area moment of inertia and mass moment of inertia.

[9]

Dynamics of Particles

Displacement, Velocity, acceleration and their relationship–Relative motion –Projectile motion in horizontal plane–Newton's law–Work Energy Equation – Impulse and Momentum.

[9]

Elements of Rigid Body Dynamics, friction and Beams

Translation and Rotation of Rigid Bodies: Velocity and acceleration–General Plane motion: Crank and Connecting rod mechanism.

Friction

Frictional force–Laws of Coloumb friction–Simple contact friction–Ladder friction-Rolling resistance–Ratio of tension in belt.

Transverse bending on beams

Types of beams: Supports and loads – Shear force and bending moment in beams – Cantilever, simply supported and overhanging beams.

[9]

50 MY 001 - Constitution of India

Common to all Branches

Semester	Hours / Week			Total hrs	Credit C	Maximum Marks		
	L	T	P			CA	ES	Total
II	2	0	0	30	-	100	-	100
Objective(s)	<ul style="list-style-type: none"> To know the premises informing the twin themes of liberty and freedom from a civil rights perspective. To address the growth of Indian opinion regarding modern Indian intellectuals' constitutional role and entitlement to civil and economic rights as well as the emergence of nationhood in the early years of Indian nationalism. To address the role of socialism in India after the commencement of the Bolshevik Revolution in 1917 and its impact on the initial drafting of the Indian Constitution. To gain knowledge on bill passing To acquire knowledge on function of election commission 							
Course Outcomes	<p>At the end of the course, the student will be able to</p> <ol style="list-style-type: none"> Discuss the growth of the demand for civil rights in India for the bulk of fns before the arrival of Gandhi in Indian politics. Discuss the intellectual origins of the framework of argument that informed the conceptualization of social reforms leading to revolution in India. Discuss the circumstances surrounding the foundation of the Congress Socialist Party [CSP] under the leadership of Jawaharlal Nehru and the eventual failure of the proposal of direct elections through adult suffrage in the Indian Constitution. Discuss the passage of the Hindu Code Bill of 1956. Explain the functions of Election Commission 							

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

History of Making of the Indian Constitution:

History - Drafting Committee, (Composition& Working)

[2]

Philosophy of the Indian Constitution:

Preamble - Salient Features

[2]

Contours of Constitutional Rights & Duties:

Fundamental Rights - Right to Equality - Right to Freedom - Right against Exploitation -Right to Freedom of Religion - Cultural and Educational Rights - Right to Constitutional Remedies - Directive Principles of State Policy - Fundamental Duties.

[6]

Organs of Governance:

Parliament - Composition - Qualifications and Disqualifications - Powers and Functions Executive - President - Governor - Council of Ministers - Judiciary, Appointment and Transfer of Judges, Qualifications - Powers and Functions.

[6]

Local Administration:

District's Administration head: Role and Importance, - Municipalities: Introduction, Mayor and role of Elected Representative, CEO of Municipal Corporation - Pachayati raj: Introduction, PRI: ZilaPachayat - Elected officials and their roles, CEO ZilaPachayat: Position and role- Block level: Organizational Hierarchy (Different departments) -Village level: Role of Elected and Appointed officials - Importance of grass root democracy.

[9]

Election Commission:

Election Commission: Role and Functioning- Chief Election Commissioner and Election Commissioners- State Election Commission: Role and Functioning- Institute and Bodies for the welfare of SC/ST/OBC and women.

[5]

50 ME 0P1 – Engineering Practices Laboratory

Common to all branches

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			CA	ES	Total
II	0	0	4	60	2	60	40	100
Objective(s)	<ul style="list-style-type: none"> To acquire skills in basic engineering practices. To identify the hand tools and instruments. To provide hands on experience in Fitting, Carpentry, Sheet metal, Welding and lathe shop. To provide practical training on house hold wiring and electronic circuits. To offer real time activity on plumbing connections in domestic applications. 							
Course Outcomes	<p>At the end of the course, the student will be able to:</p> <ol style="list-style-type: none"> Perform facing, plain turning, drilling. Make a model of fitting and carpentry: Square, Dovetail and Cross lap joints. Fabricate the models of sheet metal and welding joints. Construct and demonstrate electrical and electronic wiring circuit. Construct the water pipe line in plumbing shop. 							

Machine shop

Safety aspects in machine shop, Study of Lathe and Radial drilling machine, Turning, Facing and Drilling.

Fitting and Carpentry

Safety aspects in Fitting and Carpentry, Study of tools and equipments, Preparation of models- Square, Dove tail joint, Cross Lap.

Sheet Metal and Welding

Safety aspects in Sheet metal and Welding, Study of tools and equipments, Sheet metal models - Scoope, Cone, Tray, Preparation weld joints -Lap, butt, T-joints. Study of Gas Welding and Equipments.

Electrical Wiring & Electronics

Safety aspects of Electrical wiring, Study of Electrical Materials and wiring components, Wiring circuit for a lamp using single and stair case switches. Wiring circuit for fluorescent lamps, Basic electronic circuit.

Plumbing

Study of plumbing tools, assembly of G.I. pipes/ PVC and pipe fittings, Cutting of threads in G.I.Pipes /PVC by thread cutting dies.

Smithy, Plastic moulding and Glass cutting

Safety aspects in smithy, plastic moulding and glass cutting, Study of tools and equipments.

K.S. Rangasamy College of Technology - Autonomous							R 2018	
50 ME 008 - Elements of Mechanical Engineering								
B.Tech Textile Technology								
Semester	Hours / Week			Total Hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
III	3	1	0	60	4	50	50	100
Objective(s)	<ul style="list-style-type: none"> To impart the basic knowledge on mechanisms and types of cams which are essential for understanding the textile machineries. To impart the basic knowledge of strength of materials and power transmissions which are essential for understanding the textile machineries. To acquaint the basic properties of steam and functions of steam boilers used in textile industries. To acquire the basic functions of pumps, hydraulic devices used for processes in textile industries. To utilize various air compressors, clutches and brakes used in automobiles. 							
Course Outcomes	<p>At the end of the course the students will be able to</p> <ol style="list-style-type: none"> 1. Design and construct the various cam profile and follower using various follower motions. 2. Describe the concepts of stresses and strains, their significant effects in engineering applications. 3. Select and design the appropriate power transmission drives for various requirements 4. Explain the properties of steam and different kind of steam boilers 5. Explain the working principles of pumps, hydraulic devices, air compressors, clutches and brakes. 							
<p>Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.</p>								
<p>Basics of Mechanisms Basic concepts of Link, Pair, Machine and Structure- Degree of freedom – Grashoff's law – Inversion of 4-bar and single slider crank mechanisms. Cams: Types of cams and followers – Motions of the follower: Simple, Harmonic and Cycloidal motion – Design of tappet mechanism – Construction of tappet cam profile. [9]</p>								
<p>Strength of Materials Basics of strength of materials: Simple stresses and strains in a bar – Poisson's ratio – Elastic Moduli – Thermal stress and strain. Torsion of solid, hollow circular shafts and Stepped shafts – Power transmission, strength and stiffness of shafts. Leaf spring – Stresses and deflection in close coiled helical spring. [9]</p>								
<p>Power Transmission Drives Belt drives: Flat belts and V-belts – types of belt drives –velocity ratio of belt drive – ratio of tensions – length and power transmitted by a belt. Chain drive: Roller chain drive. Gear drive: Types of gears – Spur, Helical, Bevel and Worm gears – Types of gear trains – Simple, compound and epicyclic gear trains – Differential gear. [9]</p>								
<p>Properties of Steam and Steam Boilers Formation of steam – Temperature vs. Enthalpy diagram (T-H diagram) – wet steam, saturated steam and superheated steam – dryness fraction, wetness fraction, specific volume, enthalpy and internal energy of steam – Use of steam tables. Boilers: Classification – Fire tube and Water tube boilers – Cochran boiler, Lancashire boiler, Babcock and Wilcox boiler – Boiler mountings and accessories – Applications of steam boilers. [9]</p>								
<p>Pumps, Hydraulic Devices, Clutches and Brakes Pumps: Classification – Components and working of Reciprocating and Centrifugal pumps. Hydraulic devices: Working of Hydraulic press and Hydraulic lift – Air compressors. Clutches and brakes: Types – Construction and working principle – Applications. [9]</p>

50 CH 002 - Chemistry for Textile

B.Tech Textile Technology

Semester	Hours / Week			Total hours	Credit	Maximum marks		
	L	T	P			C	CA	ES
III	3	0	0	45	3	50	50	100
Objective(s)	<ul style="list-style-type: none"> To help the learners about introduction, reaction and mechanism of polymers. To familiarize the learners with the physical and chemical properties of polymers. To enlighten the learners about characterization techniques. To endow with an overview of auxiliaries and colorants. To enlighten the methods of fabrication of polymers and preparation, properties and applications of composites. 							
Course Outcomes	<p>At the end of the course, the student will be able to:</p> <ol style="list-style-type: none"> Recognize the concepts of polymer and analyses the different polymerization mechanisms and techniques. Relate polymer properties to their structure and conformation. Determine the molecular weight and crystallinity of polymer. Interpret the mechanism and conditions of various bleaching agent and theory for colour of the dye. Analyze the various fabrication methods and properties and applications of fiber reinforced composites. 							

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Introduction to Polymer

Terminology – classification - functionality of monomer – degree of polymerization- types of polymerization - addition, condensation and copolymerization - Mechanisms of polymerization - free radical – ionic – co-ordination - Polymerization techniques – bulk – solution – suspension - emulsion. [9]

Properties of Polymer

Structure-property relationship of polymer - Technological function of polymers -fibers, elastomers, plastics - Chemical property - solubility and swelling - chemical reactivity - diffusion and permeability - aging and weathering, electrical property - optical property, mechanical property, strength of polymers - degradation of polymers. [9]

Characterization of Polymer

Molecular weight distribution - number average, viscosity average and weight average. Determination of molecular weight by gel permeation chromatography - Ubbelohde viscometer. Glass transition temperature (T_g) - factors affecting T_g - significance- Crystallinity- degree of crystallinity- factors affecting crystallinity - effects of crystallinity in properties of polymer. Principle - interpretation and applications of DSC, TGA, TMA and DTGA. [9]

Auxiliaries and Colorants

Surfactant: classification and significance. Types of bleaching agents – Reducing bleaching agents – Sulphur dioxide and Sodium hydro sulphite - Oxidising bleaching agents - calcium hypochlorite - hydrogen peroxide - chlorine dioxide - sodium hypochlorite – preparation, bleaching mechanism and conditions of bleaching. Determination of available chlorine in bleaching powder - percentage of hydrogen peroxide. Dyes - Witt's theory of colour and constitution, classification of dyes and applications. [9]

Fabrication of Polymers and Composites

Compounding- Additives for polymer – fillers – plasticizers – lubricants – accelerators – stabilizers - flame retarders – pigments - nucleating agents - blowing agents - adhesives. Fabrication of polymer - injection moulding - extrusion moulding - blow moulding - compression moulding - lamination. Composites – classification - Fiber reinforced plastics- preparation, - properties and applications. [9]

50 TT 301 - Fibre Science

B.Tech. Textile Technology

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
III	3	0	0	45	3	50	50	100

- Objective(s)
- To impart knowledge on production of natural and regenerated fibres.
 - To impart knowledge on applications and properties of natural fibres.
 - To impart knowledge on applications and properties of regenerated fibres.
 - To impart knowledge on applications and properties of protein fibres.
 - To impart knowledge on analysis of various fibres.

- Course outcomes
- At the end of the course, the students will be able to**
1. Explain about polymers and classify the textile fibres and its properties.
 2. Summarize the cultivation / extraction process, properties and applications of Natural cellulosic fibres and their structure.
 3. Explain the manufacturing, properties and applications of regenerated cellulosic fibres and their structure.
 4. Summarize the production, properties and applications of protein and other regenerated fibres with their structure and applications of high performance fibres.
 5. Explain the Identification of various fibres and blend proportion by various methods.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Introduction

Definition - staple fibre, filament; classification of textile fibres; High performance fibres. Essential and desirable properties of fibres. Requirements of fibre forming polymers. Types of polymers; intra polymer bonding, inter polymer forces of attraction, degree of polymerization, glass transition temperature. Principle of manmade spinning systems – Dry, Wet, Melt and Gel spinning. [8]

Natural Cellulosic Fibres

Cultivation, properties and applications of cotton; Brief study about BT, coloured and organic cotton. Extraction, properties and application of flax, jute, ramie, hemp, sisal, coir, banana and pine apple fibres. Morphological and chemical structure of natural cellulosic fibres. [10]

Regenerated Cellulosic Fibres

Production, properties and applications of viscose rayon, cuprammonium rayon, acetate rayon, bamboo, modal and lyocell fibres; Study of morphological and chemical structures of regenerated cellulosic fibres. [9]

Protein and other Regenerated Fibres

Morphological structure and chemical constitution of wool and silk. Types, production, properties and applications of wool, silk, soya bean, casein, alginate, chitin and chitosan fibres. Study on spider silk. [12]

Identification of Fibres

Fibre identification- microscope, chemical, burning, feeling, staining, density measurement methods. Determination of blend proportion. Determination of moisture content and moisture regain. [6]

Total Hours: 45**Text book(s):**

1. S.P.Mishra, "A Text book of Fibre science and technology", New age international publishers, Chennai.

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
III	4	0	0	60	4	50	50	100
Objective(s)	<ul style="list-style-type: none"> To expose the students to the various methods in structural investigation of fibres. To enable the students to understand the moisture absorption properties of fibres. To enable the students to understand the mechanical properties of fibres. To enable the students to understand the optical and frictional properties of fibres. To enable the students to understand the thermal and electrical properties of fibres. 							
Course Outcomes	<p>At the end of the course, the students will be able to</p> <ol style="list-style-type: none"> Review the different methods in the investigation of fibres. Describe the moisture absorption properties of fibres. Discuss the concepts of mechanical properties of fibres. Explain the optical and frictional properties of fibres. Outline the thermal and electrical properties of fibres. 							

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Structural Investigation of Fibres

Basic requirements for fibre formation; Models of fibre structure-fringed micelle, fringed fibril and fringed lamellar models. Investigation of fibre structure by X-ray diffraction, SEM, TEM, STEM, FTIR and NMR. [10]

Moisture Absorption Properties of Fibres

Definitions- humidity, relative humidity, standard testing atmosphere, moisture content and regain; hysteresis in moisture absorption; moisture absorption behaviour of textile fibres; Influence of various factors on regain; absorption in crystalline and amorphous regions.

Heats of sorption-Integral and differential, measurement, effects of heats of sorption; Conditioning of fibres, mechanism of conditioning, factors influencing the rate of conditioning; swelling of fibres, types of swelling and its measurement. [12]

Mechanical Properties of Fibres

Tensile property- definitions related to tensile property; stress strain curves of various textile fibres and its importance, influence of moisture and temperature on tensile characteristics, Weak-link effect.

Elastic recovery and its relation to stress and strain of various textile fibres; Mechanical conditioning of fibres.

Time dependent effects- creep and stress relaxation phenomena; Directional effects – Brief study on flexural and torsional rigidity of fibres. [14]

Optical and Frictional Properties of Fibres

Optical property - Refractive index and its measurement; Birefringence and its measurement; Absorption and dichroism; reflection and lustre of fibres.

Frictional property - Amonton's and Bowden's law of friction, various influencing factors- load, area of contact, speed of sliding, state of surface and regain; directional frictional effect of wool. [12]

Thermal and Electrical Properties of Fibres

Thermal property- structural changes in fibres on heating, thermal transitions and melting; heat setting of fibres and its importance. Electrical property- mass specific resistance; influence of moisture, temperature and impurities on resistance; Dielectric properties-factors influencing dielectric properties of fibre; Static electricity – introduction, problems and elimination techniques. [12]

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
III	3	0	0	45	3	50	50	100
Objective(s)	<ul style="list-style-type: none"> To enable the students to learn the theory of various operations carried out at different stages of pre spinning process. To expose the students to different yarn numbering systems. To know the influence of various parameters on the quality of yarn and its productivity. To educate the inter-relationship of the process of conversion of fibers to yarns and the related machinery features. To know the latest developments, cleaning efficiency and stop motions at different stages of pre spinning process. 							
Course Outcomes	<p>At the end of the course, the students will be able to</p> <ol style="list-style-type: none"> Describe the mechanism of ginning, its performance on yarn quality, classify yarn numbering systems, the mechanism of blow room machineries and its latest developments. Summarise the principle, mechanism, settings, cleaning efficiency, nep removal and latest developments of carding machine. Discuss the principle, settings, auto levelling and types of drafting systems in modern draw frame. Explain the mechanism of modern comber, timing operation and its preparatory machines. Describe the principle, mechanism, settings and latest developments in speed frame. 							

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Ginning and Blow Room

Sequence of spinning machinery for Short staple and Long staple spinning. Brief study on Yarn numbering systems. Ginning: preparatory processes for ginning, working of different types of gins; Selection of gins, Effect of ginning performance on yarn quality. Blow room: principle and description of opening, blending and cleaning machines; Mechanism of lap formation; contamination removal; cleaning efficiency and control of nep generation and waste removal; Latest developments in blow room machines. [9]

Carding

Chute feed system. Basics of opening, cleaning and fibre individualization; Working of modern flat cards- speeds, settings and functions of different elements, drives; card clothing and its maintenances; concept of autoleveller in carding; Control of waste, cleaning efficiency; Latest developments in carding. [9]

Drawing

Introduction to doubling/drafting. Principle and working of modern draw frame; working of various types of drafting systems-concept of roller setting, roller weighing system and distribution of draft; Coiling; micro dust collection; web condensation; roller lapping; Stop motions; Concept of autoleveller in draw frame; Latest developments in drawing. [9]

Combing

Preparatory process- Principle and working of sliver lap, ribbon lap and super lap formers; Modern comber: working principle, sequence and timing of operations in combing; comber settings; concept of piecing waves, asymmetric web condensation; Combing efficiency and nep removal efficiency; Latest developments in comber. [9]

Speed Frame

Principle and working of modern speed frame; drafting system - components, their functions and specifications, roller setting, Mechanism of winding and bobbin building - mechanical and electro mechanical; Bobbin lead and flyer lead; Stop motions; Latest developments in speed frame. [9]

50 TT 304 - Fabric Manufacturing Technology I								
B.Tech. Textile Technology								
Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
III	3	0	0	45	3	50	50	100
Objective (s)	To impart basic knowledge on <ul style="list-style-type: none"> • Sequence of operation in warp and weft preparation. • Objectives and principle of preparation of warp winding. • Objectives and principle of preparation of pirn winding. • Objectives and principle of preparation of warping. • Objectives and principle of preparation of sizing and drawing-in. 							
Course Outcomes	At the end of the course, the students will be able to <ol style="list-style-type: none"> 1. State the sequence of weaving preparatory processes and classification of winding machines. 2. Explain the working principles of various types of winding machines and their production calculation. 3. Describe principle and working of weft winding machines and their production calculation. 4. Explain principle and working of various warping machines and their defects and remedies. 5. Explain the objectives and working principles of sizing machines and drawing –in. 							
Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.								
Introduction Sequence of operation in warp and weft preparation. Various types of woven fabrics - plain, stripes, checked, dyed, printed and denim; Different types of supply packages; Winding - angle of wind, angle of cone, traverse ratio; classification of winding machines, characteristics of parallel winding, cross winding and precision winding. [6]								
Warp Winding Objects of winding; principles of random and precision winders; working of conventional and modern cone and cheese winding machines; Function of various parts – tension devices, slub catchers, stop motions, types of drum - half accelerated and fully accelerated drums, anti-patterning devices, anti-ballooning devices. Classification of yarn faults and its removal; concepts in yarn clearing – mechanical, optical and electronic yarn clearers; knotters and splicers, clearing efficiency. Air requirements for modern winding machines. Calculations based on winding parameters. [10]								
Pirn Winding Objects and principles of pirn winding; Types of pirn winding machine - modern automatic pirn winders, function of parts. Production calculations in cone, cheese and pirn winding machines. Winding of synthetic and blended yarns, Yarn preparation for hosiery process; Package preparation for dyeing; Winding package faults and remedies - cone, cheese and pirn winding. [9]								
Warping Warping - Objectives; classification of warping machines; working principle of beam warping machine- creel types, stop motion, length measuring motion; working principle of sectional warping machine- creel, stop motion, length measuring motion. Features of modern warping machines; Warping defects - causes and remedies; production calculations in warping machine. [10]								
Sizing & Drawing – In Sizing -Objectives of sizing, sizing ingredients and recipe for various fibres, size paste preparation. Types of sizing machines and its function; marking and measuring motion; Concept of single end sizing. Sizing of blended and filament yarns. Modern developments in sizing. Sizing defects- causes and remedies; Production calculations in Sizing. Drawing –in - Needs and methods of drawing-in process, leasing, knotting and pinning machines. Selection and care of reeds, healds and drop pins; control of cross ends and extra ends. [10]

50 TT 3P2 - Yarn Manufacturing Technology Laboratory I

B.Tech. Textile Technology

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
III	0	0	4	60	2	60	40	100

Objective(s)	<ul style="list-style-type: none"> To enable the students to handle the preparatory machines and operate them practically. To impart knowledge the students to learn material passage and parts of spinning preparatory machines. To develop the students to calculate the production of various preparatory machine. To make the students to know about optimum settings on various mechanism of preparatory machine based on the process variables. To know the draft, draft constant, twist, twist constant, production and working of building mechanism in speed frame.
--------------	---

Course Outcomes	<p>At the end of the course, the students will be able to</p> <ol style="list-style-type: none"> 1. Explain the basic working mechanism of ginning machine and calculate the speed of ginning machine. 2. State the principle of opening, cleaning and mixing of fibres in blow room, mechanism of lap formation in scutcher. 3. Practice the working of cards with optimum settings and production, draft calculation. 4. Set the settings and practice the working of draw frame and production, draft calculation. 5. Demonstrate the working of comber, modern speed frame machine, its building mechanism and production, draft calculation.
-----------------	---

List of Experiments

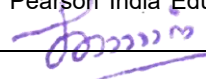

1. Passage of material through double roller McCarthy ginning machine and calculation of the speeds.
2. Passage of material through blow room.
3. Calculation of speed, production and cleaning efficiency in blow room.
4. Passage of material through carding machine, production of sliver and calculation of hank of sliver, draft, production in carding machine.
5. Measurement of settings between various carding elements in carding machine.
6. Passage of material through draw frame, production of sliver and testing of drawn sliver hank. Calculation of draft and production in draw frame.
7. Passage of material through comber and settings in comber.
8. Passage of material through speed frame, production of roving and testing of roving hank.
9. Calculation of twist, twist constant, draft and production in speed frame.
10. Study of builder motion mechanism in speed frame.

IV	3	0	0	45	3	50	50	100
Objective(s)	<ul style="list-style-type: none"> Theory of yarn formation by different spinning systems. Effect of process parameters used in the spinning system on yarn quality. Principles and mechanism of advanced spinning systems. Provide the knowledge method of yarn plying and calculation of resultant count. Raw material requirement, yarn structure and preparation of different types of yarn. 							
Course Outcomes	<p>At the end of the course, the students will be able to</p> <ol style="list-style-type: none"> Describe the mechanism and working principles of various parts of ring frame and compact spinning, compare the properties of compact yarn with ring yarn. Discuss the raw material requirement, yarn structure and preparation for rotor spinning, summarizes its working mechanism. Discuss the raw material requirement, yarn structure and preparation for friction spinning, summarizes its working mechanism. Describe the principle of yarn production in self twist, wrap, core, siro and solo spinning systems. Summarize the twist level, methods of plying and count calculation in ply yarn and discuss the fancy yarn production. 							
<p>Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.</p>								
<p>Ring and Condensed Yarn Spinning Principles and working of ring spinning machine; drafting system- components, their functions and specifications, roller settings; functions of yarn guide, balloon control ring, separators; types of rings and travellers; spindle and drives. Working principle of builder motion; auto doffing mechanism; control of end breakage rate; power consumption; control of hard waste. Latest developments in ring spinning. Principle of compacting, different methods of condensed yarn manufacture, comparison of condensed yarn properties with that of ring yarn, applications. [10]</p>								
<p>Rotor Spinning Raw material requirement and preparation; principle of operation - feeding, opening, cleaning, drafting, twisting and winding; process parameters influencing spinning performance and yarn quality; yarn structure, properties of ring and rotor spun yarns; limitations; applications, Latest developments in rotor spinning. [9]</p>								
<p>Friction Spinning Principle of opening, cleaning, drafting, twisting and winding in DREF II and DREF III spinning; structure, properties and applications of friction spun yarns. [8]</p>								
<p>Other Spinning Systems Air-Jet and Air-Vortex Spinning- Principles of drafting, twisting and winding in air-jet and air-vortex spinning; structure, properties and applications of air-jet and air-vortex yarns. Principle of yarn production in self-twist, wrap, core, siro and solo spinning systems. Properties and applications. [10]</p>								
<p>Yarn Plying and Fancy Yarns Merits of plying; methods of plying-TFO, ring twisting; selection of twist level for plying; calculation of resultant count of plied yarns; Fancy yarns-types and production methods, applications. [8]</p>

50 TT 403 - Textile Chemical Processing I

B.Tech. Textile Technology

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
IV	3	0	0	45	3	50	50	100

Objective(s)	<ul style="list-style-type: none"> To impart technical knowledge on desizing and scouring process. To impart technical knowledge on bleaching and mercerizing process. To impart technical knowledge on cellulosic material dyeing process. To impart technical knowledge on synthetic material dyeing process. To impart knowledge on the construction and working principles of wet processing and machineries.
--------------	--

Course Outcomes	<p>At the end of the course, the students will be able to</p> <ol style="list-style-type: none"> 1. Explain the wet process sequences for various fabrics and summarize the pretreatment processes and their efficiency for cotton, wool and silk material. 2. Describe the objectives and types of bleaching and mercerization of different materials also evaluate their efficiency and select suitable chemicals and other auxiliaries. 3. Explain the classification and applications of various dyes and analyze their fastness properties. 4. Summarize the principle of dyeing of synthetic fibres with various techniques. 5. Demonstrate the working principles involved in preparatory and dyeing machineries.
-----------------	--

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Desizing and Scouring

Wet process sequences for cotton, wool, silk, jute, polyester and blended fabrics (P/C, P/V).

Desizing: Desizing methods, enzymatic desizing-mechanism and process conditions, desizing efficiency.

Scouring: mechanism and machines, process conditions and scouring efficiency. Wool carbonizing and degumming of silk. [8]

Bleaching and Mercerizing

Bleaching: Hypochlorite and hydrogen peroxide bleaching - effect of process parameters; per-acidic, sodium chlorite, ozone, enzymatic bleaching; batch, semi-continuous and continuous processes; continuous scouring and bleaching machines; bleaching of viscose/linen, cotton/viscose, and polyester/cotton blends; evaluation of bleaching process.

Mercerization: objectives, methods, process conditions and their effects; yarn mercerizer; fabric mercerizing machine – chain, chainless and circular; evaluation of mercerizing process. [10]

Dyeing of Cellulose Fibres and Protein Fibres

Classification of Dyes, Pigments and their properties; Dye selection, Theory of dyeing. Affinity and Substantivity of dyes. Dyeing mechanism of cellulosic materials with direct dyes, reactive dyes and vat dyes.

Dyeing mechanism of wool and silk materials with acid dyes. Wash, rub and light fastness measurements. [9]

Dyeing of Synthetic Fibres

Mass coloration of synthetic fibres. Dyeing of polyester with Disperse dyes - Carrier, HTHP and Thermosol dyeing methods. Dyeing of nylon and acrylic fabrics with cationic dyes. Dyeing of elastomeric fibres and dyeing of blends. [8]

Dyeing Machineries

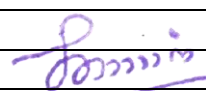

Mechanical and economic aspects of fibre, yarn, and fabric processing machines; scouring, bleaching and dyeing machines -loose stock, bale, hank, package, jigger, winch, soft flow, soft-over flow, air flow machines; padding mangles; garment dyeing machines- paddle, rotary drum, tumbler, jet dyeing. [10]

50 MY 002 – Environmental Science

Common to all Branches

Semester	Hours / Week			Total Hrs	Credit	Maximum Marks		
	L	T	P			CA	ES	Total
IV	2	0	0	30	-	100	-	100

- Objective(s)
- To help the learners to analyze the importance of ecosystem and biodiversity.
 - To familiarize the learners with the impacts of pollution and control.
 - To enlighten the learners about waste and disaster management.
 - To endow with an overview of food resources, human health, population awareness.
 - To recognize the social responsibility in environmental issues.

- Course Outcomes
- At the end of the course, the student will be able to**
- Recognize the concepts and issues related to environment, ecosystem and biodiversity.
 - Analyze the source, effects, and control measures of pollution.
 - Enlighten of solid waste and disaster management.
 - Awareness about food resources, population and health issues.
 - Analyze the social issues and civic responsibilities.

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Environment, Ecosystem and Biodiversity

Environmental studies - Scope and multidisciplinary nature - Need for public awareness - Ecosystem - Food chain - Food web- Structure and function. Biodiversity - Values of biodiversity - Endangered and endemic species - Hot spots - India a mega biodiversity nation - Threats - Conservation - In-situ and ex-situ - Case studies. [6]

Environmental Pollution

Pollution - Air, water, soil, noise and nuclear - sources, effects and control measures - Impacts of mining. - Environment protection act- Case studies. [6]

Waste and Disaster Management

Waste – wealth from waste - Solid waste - e-waste - sources, effects and control measures. Disaster management - Earth quakes - Landslides - Floods - Cyclones - Tsunami - Disaster preparedness - Case studies. [5]

Food Resources, Human Population and Health

World food problems - over grazing and desertification - effects of modern agriculture. Population - Population explosion and its impacts - HIV/AIDS - Cancer- Role of IT in environment and human health - Case studies. [6]

Social Issues and the Environment

Unsustainable to sustainable development - Use of alternate energy sources - Rain water harvesting - Water shed management - Deforestation - Green house effect - Global warming - Climate change - Acid rain - Ozone layer depletion - Waste land reclamation. Consumerism and waste products - Role of an individual in conservation of natural resources – Case studies. [7]

50 TT 4P1 - Yarn Manufacturing Technology Laboratory II

B.Tech. Textile Technology

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
IV	0	0	4	60	2	60	40	100
Objective(s)	<ul style="list-style-type: none"> To enable the students to learn material passage in the machine. To know the important parts of machines, draft, twist and production calculations in spinning machines. To train the students to handle machine and operate them practically. To make the students to know about optimum settings on various mechanism of spinning machine based on the process variables. To Know the production and characteristics of fancy yarns and doubled yarn 							
Course Outcomes	<p>At the end of the course, the students will be able to</p> <ol style="list-style-type: none"> Demonstrate the working of ring spinning frame and builder motion Calculate the speed and production of ring spinning frame. Calculate the twist and set the machine variables in ring spinning frame. Select optimum process variables and produce two ply yarn using two-for-one twister. and calculate the twist and production of two-for-one twister. Produce fancy yarns on two-for-one twister. Set the variables and produce quality yarns using open end spinning machine. Calculate the twist and production of rotor spinning machine and production of multiply yarns. 							

LIST OF EXPERIMENTS

- Passage of material through ring frame, production of yarn and testing of yarn count.
- Different settings in ring frame and selection of ring travellers.
- Calculation of twist, twist constant, draft and production in ring frame.
- Study of builder mechanism in ring frame.
- Passage of material through open end spinning machine, production of yarn and testing of yarn count.
- Calculation of production and twist in open end spinning.
- Passage of material through ring doubling machine, production of yarn and testing of yarn count. Process sequence for production of sewing threads.
- Passage of material through Two-For-One twister (TFO), production of ply yarn and measurement of ply yarn count. Calculation of twist in TFO.
- Production and quality characterization of two-fold yarns.
- Production of fancy yarns using fancy doublers.

Total Hours: 60

K.S. Rangasamy College of Technology - Autonomous							R 2018		
50 TT 4P2 - Fabric Manufacturing Technology Laboratory									
B.Tech. Textile Technology									
Semester	Hours / Week			Total hrs	Credit	Maximum Marks			
	L	T	P		C	CA	ES	Total	
IV	0	0	4	60	2	60	40	100	
Objective(s)	<ul style="list-style-type: none"> To develop skills in the operation and maintenance of weaving preparatory machines. To develop practical knowledge of dismantling, assembling and setting of basic weaving mechanisms. To prepare the pattern card for a given design. To develop the design using drop box mechanism. To know about the working principles of circular weft knitting machine. 								
Course Outcomes	<p>At the end of the course, the students will be able to</p> <ol style="list-style-type: none"> Set the optimum process variables and carry out winding using supply package winding machine and calculate the production. Practice dismantling, assembling and setting of primary motions. Perform dismantling, assembling and setting of secondary motions. Perform dismantling, assembling and setting of auxiliary motions. Comprehend the production in circular weft knitting machine. 								
LIST OF EXPERIMENTS									
<ol style="list-style-type: none"> (a) Passage of material through the cone winding machine. Setting of tensioners and slub catchers in cone winding machine. Calculation of drum speed, traverse speed, production in cone winding machine. (b) Passage of material through the pirn winding machine. Calculation of production in pirn winding machine. Passage of material through sectional warping machine. Dismantling and assembling of tappet shedding mechanism in plain power loom. Dismantling and assembling of cone over pick / under pick mechanism and study the adjustment of picking force. Dismantling and assembling of beat –up mechanism and calculation of sley eccentricity. Dismantling and assembling of negative let-off mechanism and adjustment of warp tension. Dismantling and assembling of seven wheel take-up mechanism and calculation of dividend. (a) Dismantling and assembling of weft stop motion. (b) Dismantling and assembling of warp stop motion. Designing of pegging plan on wooden lags and preparation of punched card for 4x4 drop box mechanism for a given design. Material passage and production calculation for single jersey / rib / interlock weft knitting machine.

<ul style="list-style-type: none"> Instructor can cover the syllabus by Class room activities and Assignments (5 Assignments/week) Instructor Manual has Class work questions, Assignment questions and Rough work pages Each Assignment has 20 questions from Unit 1, 3, 4 and Unit 5 and 5 questions from Unit 2. Evaluation has to be conducted as like Lab Examination. 									

50 MA 015 – Operations Research

B.Tech -Textile Technology

Semester	Hours / Week			Total hrs	Credit C	Maximum Marks		
	L	T	P			CA	ES	Total
V	3	1	0	60	4	50	50	100
Objective(s)	<ul style="list-style-type: none"> To familiarize with the basic concepts and models of the operations research To analyze the real world problems using operations research techniques To impart knowledge about optimization techniques and take effective managerial decisions To develop mathematical skills to solve the linear programming models arising from a wide range of applications To emphasize the optimization techniques for the effective utilization of available resources in engineering field 							
Course Outcomes	<ol style="list-style-type: none"> Form the Linear programming model and solve by simplex algorithms Apply the transportation and assignment models and predict the optimum solution Apply CPM and PERT techniques to control project activities <ol style="list-style-type: none"> Predict the optimal replacement policy for machineries Determine an optimal order in which n jobs can be processed <ol style="list-style-type: none"> Explain the Game theory, zero sum game and dominance property Describe the Simulation model and Monte- Carlo Technique 							

Note: The hours given against each topic are of indicative. The faculty has the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the numbers hours indicated.

Linear Programming Problems

Formulation of LP problem - Solution of LP problem by graphical method - Simplex method - Big-M method – Duality [9]

Transportation and Assignment Problems

Transportation problems: North-west corner rule - Least cost method - Vogel's approximation method - MODI method - Assignment problems: balanced and unbalanced assignment problems - Travelling salesman problems [9]

Network Analysis

Network construction - Computation of earliest start time, latest start time, total, free and independent float time – PERT- computation of optimistic, most likely, pessimistic and expected time [9]

Sequencing and Replacement Models

Processing n jobs on 2 machines - processing n jobs on 3 machines - processing n jobs on m machines. Replacement models - Individual replacement - Group replacement [9]

Game Theory and Simulation Model

Game theory: Saddle point determination - Dominance property - graphical method - Simulation model - Monte - Carlo Technique. [9]

50 TT 501 – Knitting Technology

B.Tech. Textile Technology

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
V	3	0	0	45	3	50	50	100

Objective(s)	<ul style="list-style-type: none"> To explain the mechanism of weft knitting of various knitted structures. To demonstrate the mechanism of warp knitting of various knitted structures. To impart the knowledge on basic knitted structures of various knitted fabrics. To explain the modern development in mechanism of various knitted fabric production. To impart the knowledge on recent trends in knitted garment production.
--------------	--

Course Outcomes	<p>At the end of the course, the students will be able to</p> <ol style="list-style-type: none"> Demonstrate the construction and function of various knitting elements, machines, choose yarns for knitting and mechanism of knitting of plain, rib, interlock, and purl structures. Draw the structures of plain, rib, interlock, purl, relate characteristics, end uses of fabrics with their structures, mechanism of needle selection and formation of knit, tuck, float stitches and draw the structure of derivatives. Calculate optimum knitting conditions and production; explain dimensional state of knitted fabrics and the mechanism of knitting of various structures using flat knitting machine and socks knitting. Explain construction and function of various warp knitting elements and the mechanism of knitting using Tricot and Rachel knitting machines. Draw the warp knitted structures and explain their characteristics and the influence of various factors on quality of knitted fabric.
-----------------	---

Note: The hours given against each topic are of indicative. The faculty has the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the numbers hours indicated.

Weft Knitting

Characteristics of woven and knitted fabrics; classification of weft knitting machines; comparison of warp and weft knitting; yarn quality requirements for knitting; weft knitting elements; single jersey, rib, interlock and purl knitting machines – construction and knitting operation. Needle selection in weft knitting - multi-cam tracks, pattern wheels, pattern drums, programmed and punched tapes. Knitting of technical textiles. [9]

Weft and warp Knitted Structures

Single jersey, rib, purl and interlock structures – characteristics and their derivatives – lecoste, accordian type, Swiss and derby ribs, half and full cardigan, eight lock, single pique; fundamentals of formation of knit, tuck and float stitches; warp knit structures - chain stitch, tricot, lock knit structures, satin, blind lap and inlay. [9]

Flat Knitting

Basic principles and elements of flat knitting machines; different types of flat knitting machines- manual, mechanical and computer controlled; production of various weft knitted structures using flat knitting machines; mechanism of socks knitting. [9]

Warp Knitting

Classification of warp knitting machines; preparation of yarns for warp knitting; knitting elements and working of Raschel and Tricot knitting machines, production of elementary warp knitted structures -lapping diagrams and notations. Open lap, closed lap, overlap, underlap, swinging, shogging. [9]

Recent development in knitted garments and Quality Control

Seamless garments, Fascinated garments; Process control in knitting; Effect of loop length and its shape on fabric properties and factors affecting the formation of loop; defects in knitted fabrics- causes and remedies; dimensional stability, dimensional states and dimensional parameters, spirality; production calculations in weft knitting. [9]

Total Hours: 45**Text book(s):**

50 TT 502 - Textile Chemical Processing II

B.Tech. Textile Technology

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
V	3	0	0	45	3	50	50	100
Objective (s)	<ul style="list-style-type: none"> To impart knowledge on methods and styles of printing. To impart knowledge on various printing process. To impart knowledge on various methods of finishing. To impart knowledge on various functional finishing process. To impart knowledge on effluent treatment. 							
Course Outcomes	<p>At the end of the course, the students will be able to</p> <ol style="list-style-type: none"> 1. Explain the ingredients, methods of printing and styles of printing. Printing defects and limitations 2. Describe the printing procedure of cotton, polyester, silk, wool and garment. Discuss its faults- cause & remedies 3. Explain the procedure involved in finishing of cotton materials using various machines and procedure involved in finishing of denims. 4. Describe the procedure involved in crease resistance, water proof, water repellent, flame proof and value added finishing. 5. Summarize the various treatments of textile effluents, waste disposal & solid waste reduction techniques and concepts of ISO14000. 							

Note: The hours given against each topic are of indicative. The faculty has the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

Methods and Styles of Printing

Essential ingredients and properties of printing paste; methods of printing- roller, screen (manual and flatbed) and rotary printing method; styles of printing-direct, discharge and resist; making of screens for flat bed and rotary screen machines; defects and limitations of screen printing; transfer printing; foam printing; ink jet printing, UV printing and 3D printing.

[9]

Printing of Fabrics

Printing of cotton fabric using direct, reactive, Natural dyes and pigment; printing of polyester with disperse dyes; printing of silk and wool with acid and basic dyes; digital printing; garment printing; printing faults- causes and remedies.

[9]

Finishing

Introduction to finishing- objectives- mechanical and chemical finishing; durable and temporary finishes on cotton fabrics; back filling; raising and brushing; calendaring; anti shrink finish; relaxation shrinkage, felt compacting; softening, felting, non-felting; Denim finishing- stone, enzyme wash; bio-polishing.

[9]

Functional Finishes

Crease resist finish; cross linking agents – DMDHEU, poly carboxylic acids (BTCA & citric acid) for cotton; water proof and repellent finishes for cotton and synthetics; flame resistance finishes for cellulosic's and blends; antimicrobial finishes; softeners; finishing of knits; value added finishing of garments; herbal finishes and nano finish.

[9]

Effluent Treatment

Textile effluent–textile waste water problems, textile waste water characteristics, chemicals used in textile industry; treatment of textile effluents – primary, secondary and tertiary techniques for effluent treatment; solid waste reduction and disposal; concepts of ISO 14000.

[9]

50 TT 503 - Woven Fabric Structure

B. Tech. Textile Technology

Semester	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
V	3	0	0	45	3	50	50	100
Objective(s)	<ul style="list-style-type: none"> To teach the basic of woven fabric design and its influence on fabric properties To teach the different weaves and methods of production To impart knowledge on colour theory and application to woven fabrics To understand the different concept in pile and multi layer fabrics To impart knowledge on advanced fabric structures 							
Course Outcomes	<p>At the end of the course, the students will be able to</p> <ol style="list-style-type: none"> Describe about the elements of fabric structure and elementary weaves. Explain the loom requirements for special weave and colour theory also analyze the concept of colour and weave effects. Explain the loom requirements and uses of extra thread figuring also analyze the backed fabrics and concept of bed ford cords. Analyze the designing concept of pile fabrics, multilayer fabrics and double cloths. Analyze the advanced weave structures and their loom requirements. 							

Note: The hours given against each topic are of indicative. The faculty has the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

Elements of Simple Structure

Elements of fabric structure and the devices used for analyzing the fabrics; elementary weaves – plain weave and its derivatives, twill weave and its derivatives, twill and twist interaction, twill angle; satin, sateen weaves and their derivatives; methods of representation on point paper; different types of drafts; loom requirements for producing primary weaves. [9]

Special Weaves and Colour Theory

Design, characteristics, loom requirements and uses of special weaves – ordinary honey comb, brighton honey comb, huck –a – back and its modifications, mock leno, crepe weaves; colour theory – light and pigment theory, modification of colours, application of colours, colour and weave effects. [9]

Compound Structure

Design, characteristics, loom requirements and uses of extra warp, extra weft figuring and backed fabrics; extra warp and extra weft figuring with single and two colours; backed fabrics, bed ford cords, plain faced, twill faced and wadded bed ford cords; welts, piques and wadded piques. [9]

Pile Fabrics and Multi Layer Fabrics

Design, characteristics, loom requirements and uses of pile fabrics and multilayer fabrics –Warp pile: wire pile, fast wire pile, terry weaves, terry stripe and terry check. Weft Pile: plain back, twill back velveteen; Double cloths- classification, types of stitches, wadded double cloth, warp and weft wadded double cloth, centre stitched warp and weft way double cloth; multi layer fabrics. [9]

Advanced Structures

Design, characteristics, loom requirements and uses of advanced structures – damask, brocades, tapestry, gauze and leno weaves, types of sheds, doup wire, easer bar motion and jumper motion; Russian cords – net leno. [9]

50 TT 601 - Textile and Apparel Quality Evaluation									
B.Tech. Textile Technology									
Semester	Hours / Week			Total hrs	Credit	Maximum Marks			
	L	T	P			C	CA	ES	Total
VI	3	0	0	45	3	50	50	100	
Objective(s)	<ul style="list-style-type: none"> To study the importance of quality evaluation. To know in detail the various aspects of testing fibre properties. To know in detail the various aspects of testing yarn properties. To know in detail the various aspects of testing fabric properties. To know in detail the various aspects of garment properties. 								
Course Outcomes	<p>At the end of the course, the students will be able to</p> <ol style="list-style-type: none"> Explain the fibre, yarn and fabric sampling methods. Describe the working of fibre testing equipment. Describe yarn fundamental properties and handle yarn testing equipment. Describe the fabric basic properties and handle fabric testing equipment. Implement the concept of garment checking procedure and assess the seam and accessories properties 								
<p>Note: The hours given against each topic are of indicative. The faculty has the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.</p>									
<p>Introduction Definition of quality; types of quality – quality of design, quality of conformance, quality of performance, quality control and quality assurance; factors influencing quality; reasons for textile quality evaluation; random and biased sampling, fibre sampling from bulk, combed slivers and rovings; yarn sampling; fabric sampling; standard testing atmosphere; testing methods. [9]</p> <p>Fibre Quality Evaluation Determination of fibre length and its uniformity- digital fibrograph; determination of fibre fineness and its importance; determination of fibre strength and elongation - stelometer; high speed fibre measurement- High Volume Instrument, Advanced Fibre Information System; evaluation of man-made fibre properties - single fibre fineness - vibroscope method; determination of trash; fibre maturity- caustic soda swelling method and air flow method; determination of moisture content and regain in fibres, Drying methods. [9]</p> <p>Yarn Quality Evaluation Linear density – Direct & Indirect systems and its determination; evaluation of twist in single and ply yarns; crimp; determination of evenness- capacitance method, spectrogram , variance-length curve; yarn hairiness, principles of tensile testing, tensile testing of yarn at higher speeds, factors influencing tensile characteristics; classification of yarn faults- Classimat; yarn appearance assessment – ASTM yarn grades, electronic inspection board. [9]</p> <p>Fabric Quality Evaluation Fabric Sampling; Determination of tensile and tear strength; bursting strength; Impact strength; dimensional stability; air permeability; water repellency-spray test, drop penetration test, wetting time test and shower test; thermal conductivity; abrasion resistance; snagging; pilling; crease recovery; stiffness; drape; fabric weight, colour fastness (light, washing, bleaching agents, perspiration and rubbing); Flammability. [9]</p> <p>Fabric Assessment Requirement for Apparel Fabric checking procedure - 4 point system, 10 point system; seam slippage and strength testing; Comfort- subjective and objective evaluation of fabric handle - FTT, FAST, KES; Button pull strength test, button impact test, zipper strength test. Fabric inspection machine. Testing for harmful substances in apparel. [9]</p>

Elective	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
I	3	0	0	45	3	50	50	100
Objective(s)	<ul style="list-style-type: none"> To enable the students to learn about the polymer rheology and the laws To acquire knowledge on melt spinning To gain knowledge on solution spinning To comprehend the post spinning operations To obtain ideas on new developments in fibre spinning 							
Course Outcomes	<p>At the end of the course, the students will be able to</p> <ol style="list-style-type: none"> Understand polymer rheology and the laws List various spinning techniques of polymers and parameter involved in spinning synthetic yarn Explain Properties and application of synthetic yarns Outline the need of various post spinning operations Describe advances in the spinning process 							

Note: The hours given against each topic are of indicative. The faculty has the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

Polymer Rheology

Spinability of liquids, rheology of spinning, formation of fibre structure.

[7]

Melt Spinning

Melt Spinning- Polymer Selection and Preparation, equipment, properties and applications of polyester, polyamide and polypropylene fibres.

[9]

Solution Spinning

Solution spinning- Polymer Selection and Preparation, equipment, properties and applications of aramid, acrylic, polyurethane and regenerated cellulose fibres..

[9]

Post Spinning Operations

Neck drawing, drawing systems, influence of drawing on structure and properties of fibres; Types of heat setting, influencing parameters on heat setting, influence of heat setting on fibrebehaviour; Spin finish composition and application; Evaluation methods; Texturising – Need and methods. Textured yarn characteristics.

[10]

Developments in Fiber Spinning

Liquid crystal spinning; Gel spinning, Electro spinning; Profile fibres, hollow and porous fibres; Specialty fibres poly glycolic acid, polylactic acid, chitosan fibres preparation properties and applications.

50 TT E13 -Textured Yarn Technology

B.Tech. Textile Technology

Elective	Hours / Week			Total hrs	Credit	Maximum Marks		
	L	T	P			C	CA	ES
I	3	0	0	45	3	50	50	100
Objective(s)	<ul style="list-style-type: none"> To impart knowledge on heat setting and mechanism of texturing. To understand the different methods of texturing To impart the knowledge on characteristics and various end uses of texturing To explain the concepts of different textured yarns To enable the students to prepare technological solutions for challenges in the area of texturing 							
Course Outcomes	<p>At the end of the course, the students will be able to</p> <ol style="list-style-type: none"> 1. Explain the raw materials required for texturing and explain basic principles and methods of texturing. 2. Describe the factors involved and mechanism of heat setting, discuss the fiber morphology and yarn properties during heat setting. 3. Explain about the twisting device ,heating ,cooling and take-up systems of false twist texturing and discuss about characteristics of feed yarns and process parameter like time and temperature 4. Describe the air jet texturing yarn production, express airflow pattern in different types of nozzles, loop formation mechanism and analyze the evaluation of air-jet textured yarn. 5. Describe the working procedure of stuffer box, edge crimping, and knit-de-knit, gear crimping, bi-component filament texturing and differential shrinkage texturing. 							

Note: The hours given against each topic are of indicative. The faculty has the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

Introduction

Need for bulking of synthetic yarns; texturability of fibres, state and quality of raw material required; classifications, basic principles and methods of texturing. [8]

Heat Setting

Heat setting – need, types of setting, mechanism, factors involved; effect on fibre morphology and yarn properties; evaluation of heat setting processes; fundamentals of thermo-mechanical texturing, Helanca process. [9]

False Twist Texturing

Draw texturing - simultaneous and sequential draw texturing; twisting devices; heating and cooling systems; take-up systems; characteristics of feed yarns; process parameters-time, temperature, twist, tension; evaluation of false-twist textured yarns; end-uses. [9]

Air Jet Texturing

Types of yarns produced; airflow pattern in different types of nozzles; loop formation mechanism, factors involved; evaluation of air-jet textured yarn; comparison of air-jet textured yarn with spun and false twist textured yarns; end-uses. [10]

Other Methods of Yarn Texturing

Stuffer box, edge crimping, knit-de-knit and gear crimping methods; bi-component filament texturing; differential shrinkage texturing; chemo - mechanical texturing; limitations and applications. [9]

50 TT E 14 - Process Control in Spinning								
B.Tech. Textile Technology								
Elective	Hours / Week			Total hours	Credit	Maximum marks		
	L	T	P			C	CA	ES
I	3	0	0	45	3	50	50	100
Objective(s)	<ul style="list-style-type: none"> To make the student to be conversant with following studies of process and quality control in spinning. To know the scope of process control and statistical application. To know the control of waste generation, yarn quality, raw material and productivity. To select suitable raw material and machinery set-up for the manufacturing of the yarn and fabrics with required quality. To know about outline of parameters for the satisfactory performance of various intermediate processes involved in spinning. 							
Course Outcomes	<p>At the end of the course, the students will be able to</p> <ol style="list-style-type: none"> Understand the concept of process control and know the process control in mixing, spinning preparatory, HVI, AFIS. Analyze the characteristic of fibre quality and spinnability and explain the concept of nep and hook generation and nep removal. Know the estimation of yarn realization, cleaning efficiency and cleaning intensity, understand the concept of waste control. Explain the assessment of yarn unevenness and imperfections and know the yarn faults and their remedies Analyze the cause for maximizing the production and identify parameters for satisfactory performance of intermediate processes in spinning. 							
<p>Note: The hours given against each topic are of indicative. The faculty has the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.</p>								
<p>Process Control Concept and Statistical Application Scope of process control in spinning - Identification of process variables and product characteristics to control process in the blow room, card, draw frame, comber, speed frame and yarn spinning - Concepts of developing norms and standards for spinning process. Application of statistical techniques in process and quality control. Use of HVI and AFIS for process control operation. [9]</p> <p>Control of Raw Material Quality Quality control of mixing quality through fibre quality characteristics – Concept of fibre quality index and its application – Prediction of spinnability and yarn quality – Blending irregularity;- fibre rupture analysis- Causes of nep and hook generation –nep removal in carding and combing machines. Online monitoring and control of neps and hooks on modern cards; Measurement of neps and hooks. [9]</p> <p>Control of Yarn Realization and Waste Estimation of yarn realization – Determination of trash content and cleaning efficiency, cleaning intensity in blow room and carding – Determination of comber noil and combing efficiency – Control of waste in blow room, carding and comber - Control of hard waste. [9]</p> <p>Yarn Quality Control Assessment of within and between bobbin count variations, Assessment and control of count variations in preparatory machines and ring frame –Assessment of yarn unevenness and imperfections - causes for unevenness and imperfections- analysis and interpretation spectrograms – unevenness caused by random fibre arrangement – Drafting waves – Periodic variation. Yarn faults – classification – assessment of faults – causes and methods to reduce faults. Causes for variability in strength, elongation and hairiness and measures for their control. [9]</p> <p>Production Control Factors affecting the productivity in ring spinning. Productivity indices. Methods for maximizing production in spinning machinery – New concepts. Effect of Machinery maintenance and Humidity on production; balancing of machineries. [9]</p>

50 TT E 15 - Home Textiles

B.Tech. Textile Technology

Elective	Hours / Week			Total hours	Credit	Maximum Marks		
	L	T	P			C	CA	ES
I	3	0	0	45	3	50	50	100
Objectives	<ul style="list-style-type: none"> To acquire knowledge on recent developments in furnishing and other home textile products. To analyze textiles based products used in home textiles. To acquire knowledge on various flammability requirements of home textiles. To acquire knowledge on recent developments in floor covering home textile products. To know the various designs / styles of bed linen classification, types of mattresses and mattresses covers. 							
Course Outcomes	<p>At the end of the course, the students will be able to</p> <ol style="list-style-type: none"> Describe different types fabrics, finishes and surface ornamentation on home textiles. Compare different furnishings and analyzing factors influencing in the selection of home furnishings for different products. Discuss the type sand end uses of different floor coverings and analyze the types and factors influencing of different floor coverings. Describe the types of doors, windows and their choice of fabrics used in curtains and draperies. Evaluate the properties of home textiles and describe the home decoration articles and bed linens. 							

Note: The hours given against each topic are of indicative. The faculty has the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

Introduction

Introduction to home textiles; definition and classification of home textiles, Furnishing materials - woven, non-woven and knitted; different types of fibres used for home textile; eco-friendly home textiles; Special finishes and surface ornamentation on home textile products; Indian home textiles industry and its future prospects.

[9]

Furnishings

Types of furnishings used for different interiors- living room, dining room, kitchen, bed room, bathroom and kids room. Home decorations- sofa covers, cushion, cushion cover, upholsteries, wall hangings, bolster, bolster covers and throws;

Factors influencing the selection of home furnishings for different interiors; Requirements of furnishing for different interiors, role of fabrics in interior furnishing.

[9]

Floor Coverings

Types of flooring; Types of floor covering -carpet, rugs, pads and carpet cushion; Fibres used; salient of features of carpet, rugs, cushions and pads ; Factors influencing the selection of different floor covering and its maintenance, recent developments.[9]

Curtains and Draperies

Different types of doors and windows used; Curtains and draperies- types and choice of fabrics, calculating the material required for curtains, construction of curtains for different types of windows and doors; Method of finishing draperies; Developments in tucks, pleats, uses of drapery rods, hooks, tape rings and pins.

[9]

Linens

Bed linens- classification and types of mattresses and mattresses covers; quilt, quilt cover, bed spreads, blankets, comforts and comfort covers, pads, pillows ; Properties required for hotel and hospital linens; recent developments. Testing of home textile-abrasion, antimicrobial, flammability, shrinkage and color fastness.

50 TT E 21 - Theory of Textile Structures

B.Tech Textile Technology

Elective	Hours / Week			Total hrs	Credit		Maximum Marks	
	L	T	P		C	CA	ES	Total
II	3	0	0	45	3	50	50	100
Objective(s)	<ul style="list-style-type: none"> To impart the fundamental knowledge about yarn geometry To impart the fundamental knowledge about fibre migration To impart knowledge on mechanics of staple fibre and filament yarns To impart knowledge on geometry of fabric structure To impart knowledge on geometry of knitted and non woven fabrics 							
Course Outcome	<p>At the end of the course, the students will be able to</p> <ol style="list-style-type: none"> Explain the geometry of twisted yarn and concept of packing of yarn Explain the mechanism of migration behavior of spun yarn and concept of yarn twisting Discuss the tensile behavior of yarn and concept of yarn slippage and its influencing factors Explain the geometry of fabric in various models and deformation of fabric during tensile, shear and drape. Discuss the geometry of knitted structures and load extension behaviour of knitted fabric and non woven fabric. 							

Note: The hours given against each topic are of indicative. The faculty has the freedom to decide the hours required for each topic based on importance and depth of coverage required. The marks allotted for questions in the examinations shall not depend on the number of hours indicated.

Yarn Geometry

Basic geometry of twisted yarn; Idealized helical yarn structure; Yarn count & twist factor; Twist contraction; Limits of twist; Packing of fibres in yarn - idealized packing, packing in yarns, specific volume of yarns; Relation between twist, diameter and twist angle. [9]

Fibre Migration

Ideal migration; Characterization of migration behavior; Migration in spun rayon yarns; Mechanism of migration; Form of yarn twisting: Cylindrical and ribbon twisting. [9]

Mechanics of Filament / Staple Fibre Yarns

Filament Yarn: Analysis of tensile behavior; Analysis for large extension; Prediction of breakage; Analysis of yarn mechanics by energy method; Observed extension and breakage of continuous filament yarns. Staple fibre yarn: Theoretical analysis of yarn geometry; Stress-strain distribution in yarn; Fibre obliquity and slippage; Influence of fibre length, fineness and friction on fibre slippage and yarn strength. [9]

Geometry of Fabric Structure

Geometry of Pierce, Olofson and Hamalton's models; cover factor; crimp interchange; Modification to Pierce model- race track, saw tooth and bilinear models; Application of cloth geometry; Geometrical solution during extension of cloths; Load - extension modulus; Concept of maximum weavability in woven fabrics; Deformation on shear and drape of fabrics. [9]

Geometry of Knitted Fabrics and Non Wovens

Geometry of plain knitted structures and complex knitted structures; Mechanics of knitted fabrics- warp wise load extension, biaxial stress behavior, weft wise extension. Geometry of non-woven fabrics. [9]

Objective(s)	<ul style="list-style-type: none"> To impart the knowledge of apparel marketing. To impart the knowledge of apparel merchandising. To impart the knowledge of time management To impart the knowledge of pricing and sourcing. To impart the knowledge of documentation in apparel business.
Course Outcomes	<p>At the end of the course, the students will be able to</p> <ol style="list-style-type: none"> Comprehend the basic concepts of apparel marketing, types of marketing research, marketing strategies and various types of advertising and labeling. Discuss the role & responsibilities of a merchandiser and requirements of a merchandiser. Types of buyers and concepts of visual merchandising techniques Practice the pricing theory and the concepts of sourcing of different materials, Manufacturing Resources Planning , JIT and lean manufacturing Discuss the various production scheduling techniques and process follow up for yarn, knitting and processing, the application of computer in marketing and merchandising. Know the various documents used for export, terms of payment and export incentives, the functions & objectives of IMF, WTO, GATT, MFA and concepts of exchange control regulations.

Apparel Marketing

Apparel Marketing - definition, responsibilities of a marketing division, marketing objectives and strategi Marketing research – types of marketing research; Retails and wholesale marketing strategies; Domestic international markets; Advertising - types of advertising, different media in apparel marketing; Brand loyalty identity: Labelling and licensing. [9]

Apparel Merchandising

Merchandising - definition, types of merchandising, functions of merchandising division-importance of lead time and implications of lead time, role and responsibilities of a merchandiser, quality of a merchandiser; Types of buyers ; Visual merchandising – definition, objectives, purpose of visual merchandising. [9]

Time Management In Merchandising

Production scheduling – route card format, time and action calendar: Process follow up – yarn, knitting, processing, sewing & labels; Practical check points; Computer applications in marketing and merchandising. [9]

Pricing and Sourcing

Pricing theory – factors affecting price structure in apparels, mark up and mark down.

Sourcing: Definition, need for sourcing, method of sourcing; Sourcing of accessories – linings, buttons, zippers, labels, etc.; Manufacturing resources planning (MRP); JIT – philosophy; Lean manufacturing - concepts and its application in garment industry. [9]

Documentation and Incentives

Various types of export documents – Pre-shipment & post-shipment documentation; Terms of payment; Export incentives – Advance authorization scheme, DFIA, Duty drawback scheme, RoSCTL, EPCG scheme; DEPb scheme; I/E license; Exchange control regulation; Export risk management; ECGC schemes; Export finance; IMF / WTO / GATT / MFA – functions, objectives, success & failures. [9]

K.S. Rangasamy College of Technology - Autonomous R 2018

50 TT L01 - Fibre Science and Technology

Common to all Branches (Open Elective Course)

Semester	Hours / Week			Total Hrs.	Credit	Maximum Marks		
	L	T	P			C	CA	ES
	3	0	0	45	3	50	50	100

Objective(s)	<ul style="list-style-type: none"> To impart knowledge on the basic textile terms. To impart knowledge on the production of natural, fibres. To impart knowledge on the production of synthetic and regenerated fibres. To impart knowledge on applications and properties of natural and synthetic fibres. To impart knowledge on applications and properties of regenerated cellulosic fibres.
--------------	---

Course outcomes	<p>At the end of the course, the students will be able to</p> <ol style="list-style-type: none"> Classify the textile fibres and its identification. Summarize the cultivation / extraction process, properties and applications of cellulosic fibres. Explain the production, properties and applications of manmade regenerated cellulosic fibres. Summarize the production, properties and applications of protein fibres. Describe the production, properties and applications of synthetic fibres.
-----------------	---

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Introduction

Definitions–Fibre: Textile fibre, staple fibre, filament; Yarn: Spun, Continuous filament, Monofilament and Multifilament; Fabric: Woven, Knitted and Non-woven. Classification of textile fibres with examples. Essential and desirable properties of textile fibres. Standard moisture regain of common fibres. Identification of textile fibres by Microscopic test, burning test and solubility test. [7]

Cellulosic Fibres

Cultivation, properties and applications of cotton; Extraction, properties and application of flax and jute. Study of morphological and chemical structure of natural cellulosic fibres. [9]

Man made Regenerated Cellulosic Fibres

Production process, properties and applications of viscose rayon, modal, lyocell and bamboo fibres; Study of morphological and chemical structure of regenerated cellulosic fibres. [10]

Protein Fibres

Morphological structure and chemical constitution of wool and silk. Types, production process, properties and applications of wool and silk fibres. [9]

Synthetic Fibres

Production, properties and applications of Polyester, Nylon and Polypropylene. Study of morphological and chemical structures of synthetic fibres. [10]

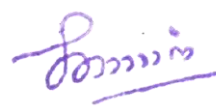

Total Hours: 45

50 TT L02 - Basics of Textile Technology

Common to all Branches (Open Elective Course)

Semester	Hours / Week			Total Hrs.	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
	3	0	0	45	3	50	50	100
Objective(s)	<ul style="list-style-type: none"> To impart knowledge on the basic textile terms and spinning systems To impart basic knowledge in the concepts involved in various mechanisms used in weaving To impart knowledge on geometry of knitted and non woven fabrics To impart knowledge on chemical processing of goods Understand the functional requirements and basic of Garment manufacturing 							
Course outcomes	<p>At the end of the course, the students will be able to</p> <ol style="list-style-type: none"> Classify the textile fibres and its identification. Explain the functioning of weaving machine and its parts Summarize the non woven and knitted fabric types and process. Explain the wet process sequences for various fabrics and summarize the pretreatment processes and their efficiency. Understand the basic garment manufacturing process and fabric pattern process. 							

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Fibre Science and Spinning

Definition of fibre, classification of textile fibers; sequence of machineries in short staple yarn spinning from ginning to cone winding and their objectives; yarn numbering system [9]

Woven Fabric Production

Woven fabric – warp, weft, weaving, path of warp; looms – classification, handloom and its parts, power loom, automatic looms, shuttleless looms, special type of looms; preparatory machines for weaving process and their objectives; basic weaving mechanism - primary, secondary and auxiliary mechanisms [13]

Non Woven and Knitted Fabric Production

Knitting – classification, principle, types of fabrics; nonwoven process –classification, principle, types of fabrics. [5]

Chemical Processing

Objectives of the processes - singeing, desizing, scouring, bleaching, mercerization; dyeing classification of dyes, types of dyeing techniques; printing - types and styles of printing; finishing treatments – chemical and mechanical finishing. [13]

Garment Manufacturing

Anthropometry, basic principles of pattern making and grading, marker planning, spreading, cutting, sorting, sewing, finishing and packing. [5]

50 TT L03 - Introduction to Fashion Design

Common to all Branches (Open Elective Course)

Semester	Hours / Week			Total Hrs.	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
	3	0	0	45	3	50	50	100
Objective(s)	<ul style="list-style-type: none"> To impart knowledge on the basic fashion design To impart basic knowledge in the clothing To impart knowledge on the Wardrobe cloth planning To impart knowledge on the basics Elements of design Understand the functional requirements of Designer boards and portfolio presentation 							
Course outcomes	<p>At the end of the course, the students will be able to</p> <ol style="list-style-type: none"> Define and discuss the fashion and related terms and reason for change in fashion and the classification Describe clothing and its purpose, Role of clothing and its status. Describe the selection of clothing for various age groups, Fashion apparel and wardrobe planning. Explain the elements and principles of the design, with the effects in the apparel Bounce out the theme and development of portfolio. 							

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Introduction to Fashion

Origin of fashion - terms and definitions - reasons for change in fashion - classification of fashion – Style, Classic, FAD, Trend – theories of fashion – movement of fashion - fashion cycle. [9]

Introduction to Clothing

Understanding clothing - Purpose of clothing: protection, modesty, attraction etc - Importance of clothing - Clothing Culture, Men and Women clothing and ornamentation - Role and status of clothing - Clothing according to climatic conditions – factors to be considered in the selection of clothing [9]

Wardrobe planning

Selection of clothes for children, middle-aged and adults. Types of clothes according to different types of human figure, Different materials for different clothes, Fabrics and colours suitable for different garments. Planning for clothing needs: Formal clothing, Clothes for parties, Clothes for sports, Casual Clothes for casualwear. Wardrobe Planning: Wardrobe for men and women [9]

Elements and Principle of Design

Elements of Design: Introduction on basics Elements of design - Silhouette, Details, Texture, Color, Lines, Principle of design: Introduction to principles of Elements of design - Proportion, Balance, Rhythm, Center of Interest, Harmony [9]

Design and Development

Designer boards - Mood board, fabric board, colour board, accessory board. Fashion illustration – head theories, Illustration techniques – strokes, hatching, shading; Colouring techniques – Medias for colouring. Portfolio presentation – styles of presentation - Fashion shows. [9]

50 TT L04 - Industrial Textiles

Common to all Branches (Open Elective Course)

Semester	Hours / Week			Total Hrs.	Credit	Maximum Marks		
	L	T	P		C	CA	ES	Total
	3	0	0	45	3	50	50	100
Objective(s)	<ul style="list-style-type: none"> To impart the knowledge on various fibers used in Industrial textile To impart the knowledge on medical textiles Understand the basic materials of geo and agro textiles To impart the knowledge on protective and smart textiles Understand the industrial application of textiles 							
Course outcomes	<p>At the end of the course, the students will be able to</p> <ol style="list-style-type: none"> Explain the scope, classification & application of industrial textiles Conclude the role of textile materials in the medical textiles product development. Describe the properties required to use in Agro textiles & Geo textiles and the application of Geo & Agro textiles. Summarize the functions & applications of protective & smart textiles. Outline the miscellaneous & Industrial applications of textile products. 							

Note: Hours notified against each unit in the syllabus are only indicative but are not decisive. Faculty may decide the number of hours for each unit depending upon the concepts and depth. Questions need not be asked based on the number of hours notified against each unit in the syllabus.

Introduction of Industrial Textile

Industrial Textiles: Introduction - Definition, Scope of Industrial textiles, Classification & Application of Industrial textiles. Fibres – Conventional Fibres, High Performance fibres, Ultra fine and Novelty fibres. [9]

Medical Textiles

Medical Textiles: Introduction, Materials used & its requirements. Classification of Medical textiles - Textiles for implantations, Non-implantations textiles, Extra-corporeal devices, Healthcare & Hygiene Products. [9]

Geo & Agro Textiles

Geo Textiles: Geo textile, Geo synthetics, Fibres and its selection for Geo textiles, Functions of Geo textiles, Engineering properties of Geo textiles, Geo textile structure, Applications for natural Geo textiles.

Agro Textiles - Textiles in Agriculture - Fibres details & Properties, Applications of Agro textiles [9]

Protective & Smart Textiles

Protective Textiles: Selection of protective clothing materials, fibres and fabrics for Protective Textiles, Textiles for environmental protection; Thermal insulation materials; Nuclear protective fabrics.

Smart Textiles - Role of smart materials in textiles, Shape Memory Fibres, Shape Memory Material, Concepts associated with shape memory materials. [9]

Industrial Applications of Textiles

Textiles in Electronics, Textile reinforcement products, Textiles for Banners and Flags, Canvas Covers and Tarpaulins, Ropes and Nets, Home and Office Furnishings, Textiles in sportswear. [9]
